

MUSIC SHARE: REMOTE PLAYLISTING

Music Share's mission is to provide an emotive music listening experience and alleviate symptoms of social isolation.

We provide seniors with:

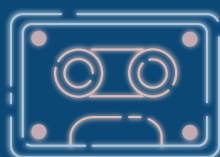

- Music that is meaningful and memorable
- Accessible and individualized programming
- Entertainment in the comfort of their own home

Music Share provides our "Music Preference Questionnaire" in order to discover what music your community members hold close to their heart.

Our questionnaires allow seniors the opportunity to participate and shape their personal experience. Once residents requests have been received they are recorded, organized and sent to our team of trained "Playlists".

Trained "Playlists" then build personalized playlists based off of each participants unique tastes and personal/cultural histories.

Familiar music stimulates brain areas involved in memory and emotional processing offering a connection back to special people, places, and moments in time

A unique Spotify account is created for your LTC community and participant playlists are available at any time via a device with Spotify installed.

Playlists are routinely maintained by Music Share for your chosen participants and updated with new music each month by our team.

"Music Share can improve quality of life for our residents, as well as any other seniors suffering from feelings of loneliness of isolation"
